The Guide to Everything eLearning for the Higher Education Administrator
Offered by Sasha Thackaberry

Learners will gain a holistic understanding of eLearning by investigating topics including: online program development; new learning models; virtual student support; instructional design and development; accessibility in online environments; and eLearning infrastructure and architecture. The course is project-based. Students will create individual virtual portfolios and presentations, and will demonstrate competencies associated with eLearning while preparing a professional product they can take with them for use in their careers.

No previous experience in the field of eLearning is necessary – this course will prepare students for a networked educational world.
