There may be times when you do not want an entire report to run. For example, you may only want to see a limited number of records to make sure that the formatting is set correctly. This document will demonstrate two ways to set up limits - creating a filter and creating a prompt.

Creating a Filter

Steps:

1. Place your cursor over the Query Explorer
2. Select Query1
3. Select the Toolbox tab
4. Drag and Drop a Data Item into the Data Items pane

5. The Data Item Expression window will open
6. Click inside the Expression Definition area
7. Type "running-count([NAME])"
8. Click the Validate icon (if your report contains a prompt, the prompt page will open)
9. Click OK
10. Click on the data item you created (Data Item1)
11. Click inside the **Name** field in the Properties Pane
12. Name the data item "Running-Count"
13. Double click on **Filter** in the Insertable Objects Pane (toolbox tab)
14. The Detail Filter Expression window will open
15. Type "[Running-Count] <= 100"

Run your report and only 100 records (or less) are returned.
Creating a Prompt

Steps:

1. Open your Prompt Page or create a new one
2. Drag the Text Box Prompt from the toolbox into the desired cell of the table
3. Rename the Parameter "record_limit"
4. Click Finish
5. Format your Prompt Page by adding text, etc.
6. Place your cursor over the Query Explorer
7. Open Query1
8. Double click on the filter you created to reduce the number of records returned (Running-Count)
10. Place your cursor over the Page Explorer
11. Select Page 1
12. Click the Filters icon on the toolbar
13. Select the prompt filter [Running-Count]<=?record_limit?
14. Select the Optional radio button on the Usage section on the right hand of the window
15. Click OK
The Prompt Page now has the new optional field to limit the number of records.
